

When disease or accident robs an individual of the ability to move, it's good to know that technology is available to restore the lost independence. That hasn't always been the case. PEAC is the first and so far only automation solution that makes comprehensive environmental control possible for the severely disabled. PEAC seamlessly ties together any number of control systems to literally control any electrical device. The PEAC system can be accessed and operated by any wireless device with a web browser including laptop and tablet computers, iPad and iPhones, Droids and any internet enabled phone.

Benefits of PEAC

- ✓ Better quality of life and more independence.
- ✓ Our system can be updated and is highly customizable.
- ✓ Nothing to install or update for users, the system is web-browser based.
- ✓ Users use their own computers. iPhone, iPad, Android, Windows, Mac, etc...
- ✓ Central server based solution so all infrastructure is controlled and monitored from one secure system.
- ✓ Power savings can be implemented
- ✓ Remote support and monitoring available

What can PEAC control?

The daily activities PEAC can control are virtually limitless, for example:

- ✓ Doors
- ✓ Lights
- ✓ Blinds
- ✓ HVAC
- ✓ Elevators
- ✓ Nurse Call / Pagers
- ✓ TV, DVD
- ✓ Any consumer electronics using IR

How is PEAC used/ controlled?

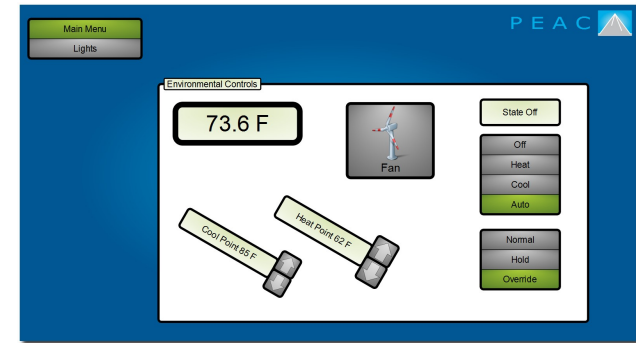

Control can be via mouse or assistive technologies like eye gaze, sip and puff or other scanning interfaces.

What does PEAC look like?

PEAC's interface is fully customizable.

Testimonials:

"I cannot begin to tell you how awesome it is to have the freedom PEAC provides. Every time I show it off, jaws drop....You made it possible." Steve Saling, resident of skilled care home for residents with ALS and MS, Leonard Florence Center for Living near Boston, MA.

"It's amazing how far wheelchair based technology has come over the years. It's even more amazing seeing how much further wheelchair users with highly involved functional deficits can go because of it." USA Tech Guide, March 27, 2010 – PEAC Automation System Controls Environment From Wheelchair
